

Tabernacle on a Melonseed

Dave Lucas

Here's some close pictures of the tabernacle I made for my melonseed "Laylah". I get ask a lot how I did it using a PVC pipe. It's easy to cut and shape pvc if you heat it. I then glassed it heavily. The total height for this one is 24 inches. I just cut my mast off 8 inches above the deck, glued it in to the existing pipe and glued the 3 inch pipe on to the stub. The weak point is the mast pivot point. Drilling a hole through the mast weakens it so you need to reinforce the mast at that area. Dave
